

Dr. Nathaniel Moorman is an associate professor in the Department of Microbiology and Immunology at the University of North Carolina at Chapel Hill. He is also a founder of the Rapidly Emerging Antiviral Drug Development Initiative (READDI), a global non-profit public private partnership, whose mission is to make broad spectrum antiviral drugs effective against virus families that cause epidemics and pandemics. His research focuses on understanding the molecular mechanisms viruses use to replicate and using this information to discover and develop new antiviral drugs.
